Course Overview

Cybersecurity & Digital Risk for Banks is a comprehensive professional training course designed to equip banking executives, cybersecurity professionals, risk managers, IT specialists, compliance officers, and decision-makers with the strategic knowledge and practical skills required to protect financial institutions against evolving cyber threats and digital risks. As banks accelerate digital transformation through online banking, cloud computing, artificial intelligence, mobile financial services, and interconnected digital ecosystems, cybersecurity has become a critical business priority for protecting assets, maintaining customer trust, ensuring operational resilience, and supporting regulatory compliance.

This course provides participants with a comprehensive understanding of cybersecurity principles within the banking sector, digital risk management frameworks, cyber governance, identity and access management, network security, cloud security, data protection, cyber threat intelligence, incident response, business continuity, disaster recovery, third-party risk management, and security operations. Participants will explore how modern cybersecurity strategies safeguard banking infrastructure, digital channels, payment systems, customer information, and critical financial services while strengthening organizational resilience against increasingly sophisticated cyber threats.

The program also examines the relationship between Cybersecurity & Digital Risk for Banks and Digital Banking Transformation, Financial Technology (FinTech), Open Banking, Banking-as-a-Service (BaaS), Enterprise Risk Management, Regulatory Compliance, Anti-Money Laundering (AML), Data Governance, Operational Risk Management, Privacy Protection, Business Continuity Management, and Digital Innovation. Participants will gain practical insights into assessing cyber risks, implementing security controls, managing security incidents, strengthening governance frameworks, and developing enterprise cybersecurity strategies aligned with business objectives and regulatory expectations.

Through interactive workshops, cyber incident simulations, banking case studies, risk assessment exercises, threat analysis, and real-world financial services scenarios, participants will strengthen their ability to evaluate cybersecurity risks, improve digital resilience, protect critical banking operations, respond effectively to cyber incidents, and support secure digital transformation initiatives. By the end of the course, participants will be equipped to develop practical cybersecurity and digital risk strategies that enhance governance, improve operational resilience, strengthen regulatory compliance, and support sustainable growth across financial institutions.
