

Course No. 1135

Engineering Team Management Training Course

ENGINEERING MANAGEMENT
INDUSTRIAL ENGINEERING, MAINTENANCE & OPERATIONS

DURATION

5 Days

LOCATION

Istanbul, Türkiye

DELIVERY

Classroom

DATES

28 Dec 2026 – 1 Jan 2027

Scheduled Event Details

CITY	Istanbul, Türkiye
DATE	28 Dec 2026 – 1 Jan 2027
DELIVERY TYPE	Classroom
COURSE FEE	€5,300

Course Overview

The Engineering Team Management Training Course is a comprehensive professional development program designed to equip engineering managers, supervisors, project leaders, and technical professionals with the leadership, communication, and management skills required to build, lead, and develop high-performing engineering teams. In today's complex engineering environments, successful organizations depend not only on technical expertise but also on the ability of engineering leaders to inspire collaboration, optimize team performance, manage diverse talent, and deliver projects that achieve strategic business objectives.

Engineering teams often consist of multidisciplinary professionals working across design, construction, operations, maintenance, manufacturing, quality, asset management, and project delivery. Managing these teams requires a balanced combination of technical knowledge, leadership capability, emotional intelligence, strategic planning, conflict resolution, and performance management. This course provides participants with internationally recognized team management practices that improve communication, strengthen accountability, enhance collaboration, and maximize engineering productivity.

Throughout the program, participants will explore modern engineering leadership methodologies, including team development, performance management, coaching and mentoring, stakeholder communication, delegation, motivation, conflict management, decision-making, workforce planning, succession planning, and continuous improvement. The course emphasizes practical application through leadership workshops, engineering case studies, team-based exercises, and real-world management scenarios that strengthen participants' ability to lead engineering professionals effectively.

The Engineering Team Management Training Course also demonstrates how effective team leadership contributes to engineering excellence, project success, operational efficiency, quality

improvement, innovation, safety, organizational resilience, and long-term business performance. By completing this course, participants will be prepared to create collaborative engineering cultures, improve workforce engagement, strengthen leadership capability, and drive sustainable organizational success across government entities, ministries, public sector organizations, financial institutions managing engineering infrastructure, oil and gas companies, utilities, manufacturing industries, construction organizations, infrastructure developers, and multinational corporations.

Objectives

- Analyze the principles of effective engineering team management and leadership throughout the engineering project lifecycle.
- Develop leadership strategies that improve engineering team performance and organizational effectiveness.
- Evaluate team capabilities, workforce performance, and resource requirements using structured management approaches.
- Apply communication, delegation, coaching, and mentoring techniques within engineering teams.
- Design performance management systems that strengthen accountability and continuous improvement.
- Improve collaboration among multidisciplinary engineering teams and project stakeholders.
- Strengthen leadership skills for managing conflict, organizational change, and workforce engagement.
- Implement workforce planning and talent development strategies that support long-term organizational capability.
- Assess engineering team performance using measurable performance indicators and professional feedback systems.
- Align engineering team management practices with organizational strategy, operational excellence, and business objectives.

Who Should Attend

This course is designed for engineering managers, project managers, engineering supervisors, maintenance managers, operations managers, construction managers, department heads, technical leaders, project engineers, reliability engineers, production engineers, planning engineers, quality managers, asset managers, engineering consultants, and professionals responsible for leading engineering teams or multidisciplinary technical projects.

The program is equally valuable for senior engineers preparing for leadership positions, plant managers, facility managers, executive managers, organizational development professionals, human resources business partners supporting engineering departments, operational excellence specialists, continuous improvement professionals, and decision makers responsible for engineering workforce development and organizational performance.

Professionals working within government entities, ministries, public sector organizations, financial institutions managing engineering assets, oil and gas companies, energy providers, manufacturing industries, transportation authorities, construction firms, mining organizations, utilities, infrastructure developers, and multinational engineering organizations will benefit significantly from the practical leadership methodologies and internationally recognized engineering team management practices covered throughout the course.

Learning Outcomes

- By the end of this course, participants will be able to:
- Explain the principles and strategic importance of Engineering Team Management.
- Build and lead high-performing engineering teams aligned with organizational objectives.
- Apply leadership, communication, and motivation techniques to improve team engagement and productivity.
- Manage multidisciplinary engineering teams using structured planning and performance management approaches.
- Resolve workplace conflicts using practical negotiation and problem-solving techniques.
- Conduct effective coaching, mentoring, and performance evaluation sessions for engineering professionals.
- Develop workforce planning and succession strategies that strengthen organizational capability.
- Monitor engineering team performance using measurable indicators and performance review processes.
- Foster collaboration, innovation, accountability, and continuous improvement across engineering teams.
- Create action plans that strengthen leadership effectiveness and support long-term engineering organizational success.

Course Outline

DAY 01

Foundations of Engineering Team Management

- Principles of engineering leadership and team management
- Roles and responsibilities of engineering managers
- Characteristics of high-performing engineering teams
- Leadership styles for technical environments

PRACTICAL

Practical workshop on leadership self-assessment and engineering team challenges

DAY 02

Building and Leading High-Performance Teams

- Team development and workforce planning
- Communication strategies for engineering organizations
- Delegation, empowerment, and accountability
- Building trust and collaboration within multidisciplinary teams

PRACTICAL EXERCISE

Practical exercise on developing high-performing engineering teams

DAY 03

Performance Management and Talent Development

- Engineering performance management principles
- Coaching and mentoring engineering professionals
- Performance reviews and constructive feedback
- Succession planning and talent development

DAY 03 — CONTINUED

PRACTICAL

Practical workshop on performance evaluation and employee development planning

DAY 04

Conflict Management and Organizational Leadership

- Conflict resolution and negotiation skills
- Managing organizational change within engineering teams
- Leadership decision-making and problem-solving
- Employee engagement and motivation strategies

PRACTICAL APPLICATION

Practical application involving leadership scenarios and conflict resolution exercises

DAY 05

Strategic Engineering Leadership and Continuous Improvement

- Engineering leadership for operational excellence
- Developing a culture of accountability and innovation
- Continuous improvement and organizational learning
- Strategic workforce development and leadership succession

FINAL WORKSHOP

Final workshop involving the development of a comprehensive Engineering Team Management action plan integrating leadership, communication, performance management, workforce planning, coaching, conflict resolution, continuous improvement, and organizational development to achieve sustainable engineering excellence and high-performing teams.
