| DELIVERY TYPE | Classroom        |
| COURSE FEE    | €3,100           |

## Course Overview

---

The Government Project Management Training Course provides a comprehensive and practical framework for planning, managing, executing, controlling, and closing projects within government entities and public-sector organizations. The course is designed to strengthen project management capabilities and equip participants with structured methodologies for delivering projects in alignment with strategic priorities, approved budgets, regulatory requirements, stakeholder expectations, and organizational objectives.

Government projects operate within complex environments characterized by public accountability, multiple stakeholders, formal governance structures, procurement requirements, regulatory controls, budget limitations, and changing priorities. Effective government project management therefore requires more than traditional project administration. It requires disciplined planning, strong governance, effective resource management, proactive risk control, stakeholder coordination, performance monitoring, and informed decision-making throughout the project lifecycle.

The program addresses the complete project management lifecycle, from project initiation and business justification through scope definition, planning, scheduling, budgeting, resource allocation, procurement, risk management, execution, monitoring and control, change management, quality assurance, reporting, and project closure. Participants will explore practical approaches for establishing project baselines, managing constraints, controlling performance, and maintaining alignment between project activities and strategic outcomes.

A strong emphasis is placed on project governance, accountability, performance management, risk management, and effective coordination between project teams, government departments, contractors, consultants, suppliers, and other stakeholders. The course also addresses practical challenges such as scope changes, delays, cost overruns, resource constraints, procurement dependencies, contractual issues, and performance gaps.

Through practical exercises, case studies, project planning activities, risk analysis, scheduling exercises, performance monitoring, and an integrated final workshop, participants will develop the practical capabilities required to manage government projects more effectively, improve execution discipline, strengthen project controls, and support successful delivery of strategic public-sector initiatives.

## Objectives

---

- Analyze the principles, methodologies, and lifecycle stages of government project management within the course framework.
- Develop structured project initiation documents covering objectives, scope, deliverables, stakeholders, assumptions, constraints, and governance requirements.
- Apply project planning techniques to establish realistic schedules, milestones, resources, budgets, and execution strategies.
- Design Work Breakdown Structures that translate project objectives into manageable activities and deliverables.
- Evaluate project risks, issues, dependencies, and constraints and develop appropriate response and mitigation strategies.
- Apply effective project cost, schedule, scope, quality, and resource control techniques during project execution.
- Strengthen stakeholder communication, coordination, reporting, and escalation mechanisms across government project environments.
- Implement structured change control processes to assess and manage changes to project scope, cost, schedule, and resources.
- Assess project performance using relevant indicators, baselines, progress measures, and management reporting tools.
- Improve project governance and accountability through clearly defined roles, responsibilities, authorities, and decision-making mechanisms.
- Develop corrective and preventive action plans to address project deviations and improve implementation performance.
- Align project management practices with organizational strategies, government priorities, compliance requirements, and expected project outcomes.

## Who Should Attend

---

This training course is designed for Government Project Managers, Project Directors, Program Managers, Project Management Office professionals, Project Controls Managers, Planning Engineers, Project Engineers, Project Coordinators, and professionals responsible for planning and delivering government projects. It is also suitable for specialists working in budgeting, procurement, contracts, risk management, quality management, strategic planning, performance management, and organizational transformation.

The program is particularly relevant to professionals working in ministries, government departments, municipalities, public authorities, infrastructure organizations, development agencies, and public investment entities. It is equally valuable for project professionals in banks, financial institutions, oil and gas organizations, engineering companies, construction organizations, and large corporations involved in complex capital, transformation, technology, infrastructure, or operational projects.

Senior managers, project sponsors, executives, and decision makers can also benefit from the course by strengthening their understanding of project governance, performance oversight, risk exposure, resource allocation, project reporting, and intervention mechanisms. The content is designed to support both project practitioners responsible for day-to-day delivery and leaders responsible for strategic project oversight and organizational results.

## Learning Outcomes

---

- Develop a structured project charter and initiation framework for a government or corporate project.
- Define project scope, objectives, deliverables, assumptions, constraints, and success criteria.
- Develop a Work Breakdown Structure and convert project deliverables into manageable work packages and activities.
- Prepare an integrated project plan covering schedule, resources, budget, risks, procurement, communication, and quality requirements.
- Develop realistic project schedules, milestones, dependencies, and baseline plans.
- Establish project governance structures with clear roles, responsibilities, authorities, and escalation mechanisms.
- Identify, assess, prioritize, and respond to project risks and implementation issues.

- Monitor project performance against approved scope, cost, schedule, quality, and resource baselines.
- Analyze project variances and develop appropriate corrective and preventive actions.
- Apply structured change control processes to evaluate and manage project changes.
- Prepare professional project status reports and management dashboards for executives and decision makers.
- Coordinate stakeholders, contractors, consultants, suppliers, and internal departments throughout project execution.
- Apply practical project management techniques to improve delivery performance, accountability, and organizational value.

## Course Outline

---

### DAY 01

## Government Project Management Foundations & Project Initiation

- Principles and characteristics of government project management
- Project management lifecycle and key management phases
- Aligning government projects with strategic objectives and organizational priorities
- Project business case, justification, objectives, deliverables, and success criteria
- Project governance structures, roles, responsibilities, and decision-making authorities
- Project stakeholders, assumptions, constraints, dependencies, and initial requirements

#### PRACTICAL APPLICATION

Develop a project initiation framework and project charter for a government project

### DAY 02

## Project Planning, Scope, Scheduling & Resource Management

- Project scope management and requirements definition
- Developing the Work Breakdown Structure and work packages
- Activity definition, sequencing, dependencies, and milestone planning

## DAY 02 — CONTINUED

- Project scheduling and critical path concepts
- Resource planning, allocation, and capacity management
- Integrating project schedules with budgets, procurement, and implementation requirements

**PRACTICAL APPLICATION**

Develop an integrated project plan and baseline schedule for a government project

## DAY 03

**Project Cost, Risk, Procurement & Quality Management**

- Project cost estimation, budgeting, and cost control
- Developing and managing project budgets and financial baselines
- Government project risk identification, assessment, and response planning
- Risk registers, risk ownership, mitigation actions, and contingency planning
- Procurement and supplier dependencies within project execution
- Quality planning, quality assurance, and quality control

**PRACTICAL APPLICATION**

Develop a project budget, risk register, procurement dependency map, and quality control framework

## DAY 04

**Project Execution, Monitoring, Control & Change Management**

- Managing project execution and coordinating project teams
- Monitoring scope, schedule, cost, resources, quality, and deliverables
- Project performance measurement and key performance indicators
- Progress reporting, dashboards, and executive management information
- Variance analysis and identification of project performance gaps
- Change control, issue management, escalation, and corrective actions

## DAY 04 — CONTINUED

**PRACTICAL APPLICATION**

Analyze project performance data, identify deviations, and develop a corrective action plan

**DAY 05**

## **Project Governance, Leadership, Performance Improvement & Delivery Excellence**

- Effective project leadership and stakeholder management
- Executive oversight, governance reviews, and decision-making
- Managing complex stakeholders, contractors, consultants, and delivery partners
- Project recovery strategies for delays, cost pressures, and performance issues
- Project closure, handover, lessons learned, and benefits realization
- Continuous improvement and strengthening project management maturity

**FINAL WORKSHOP**

Develop an end-to-end Government Project Management framework covering initiation, governance, scope, planning, scheduling, budgeting, resources, procurement, risk, quality, execution, monitoring, reporting, change control, stakeholder management, corrective action, closure, and lessons learned.
