Course Overview

The Public Finance & Fiscal Policy Training Course provides a comprehensive and practical framework for understanding public finance, fiscal policy, government revenues and expenditures, public debt, fiscal sustainability, and the broader economic role of government. The course is designed to strengthen participants' ability to analyze fiscal conditions and support sound financial and policy decisions in the public sector.

Public finance is central to effective government management because fiscal decisions directly influence economic stability, public investment, service delivery, resource allocation, and long-term financial sustainability. The program examines how governments mobilize financial resources, allocate public funds, manage fiscal pressures, and respond to changing economic and social conditions.

The course explores key areas including taxation and government revenues, public expenditure, fiscal deficits and surpluses, public debt, fiscal rules, budget policy, intergovernmental finance, and fiscal risk. Participants will develop an understanding of how fiscal policy instruments influence economic activity and how governments can balance development priorities with fiscal discipline.

A strong emphasis is placed on fiscal analysis and policy evaluation. Participants will learn how to assess fiscal trends, analyze the impact of fiscal measures, evaluate revenue and expenditure policies, identify fiscal risks, and assess the sustainability of government finances under different economic scenarios.

Through practical exercises, fiscal analysis, policy simulations, economic scenarios, and government case studies, participants will develop the analytical capabilities required to understand complex public finance issues and contribute effectively to fiscal planning, policy development, and

strategic government decision-making.

Objectives

- Analyze the fundamental principles and components of public finance.
- Understand the role of fiscal policy in economic stability and sustainable development.
- Evaluate government revenue and expenditure structures and their fiscal implications.
